

Active substances set

Search phrase: Multiple myeloma and plasma cell neoplasms

Below you will find a list of active substances registered by the European Medical Agency (EMA) in the last 15 years, recommended by the European Society of Clinical Oncology (ESMO) and their reimbursement status in the country.

	nyeloma and plasma cell ne		
lbrutinib	lbrutinib as a single agent is indicated for the treatment of adult patients with Waldenström's macroglobulinaemia (WM) who have received at least one prior therapy, or in first line treatment for patients unsuitable for chemo- immunotherapy. Ibrutinib in combination with rituximab is indicated for the treatment of adult patients with WM.	•	NO REIMBURSEMENT ESMO
Selinexor	Selinexor is indicated: - in combination with bortezomib and dexamethasone for the treatment of adult patients with multiple myeloma who have received at least one prior therapy in combination with dexamethasone for the treatment of multiple myeloma in adult patients who have received at least four prior therapies and whose disease is refractory to at least two proteasome inhibitors, two immunomodulatory agents and an anti-CD38 monoclonal antibody, and who have demonstrated disease progression on the last therapy.	•	NO REIMBURSEMENT ESMO
ldecabtagene vicleucel	Idecabtagene vicleucel is indicated for the treatment of adult patients with relapsed and refractory multiple myeloma who have received at least two prior therapies, including an immunomodulatory agent, a proteasome inhibitor and an anti-CD38 antibody and have demonstrated disease progression on the last therapy.		NO REIMBURSEMENT ESMO

	Ciltacabtagene autoleucel is indicated for the treatment of		
	adult patients with relapsed and refractory multiple		
Ciltacabtagene	myeloma, who have received at least one prior therapy,	U	NO REIMBURSEMENT
autoleucel	including an immunomodulatory agent and a proteasome		ESMO
	inhibitor, have demonstrated disease progression on the		
	last therapy, and are refractory to lenalidomide.		
	Carfilzomib in combination with daratumumab and		
	dexamethasone, with lenalidomide and dexamethasone, or	0	REIMBURSEMENT
Carfilzomib	with dexamethasone alone is indicated for the treatment of		WITH RESTRICTIONS
	adult patients with multiple myeloma who have received at		ESMO
	least one prior therapy.		
	Elotuzumab is indicated in combination with lenalidomide		
	and dexamethasone for the treatment of multiple myeloma		
	in adult patients who have received at least one prior		
	therapy. Elotuzumab is indicated in combination with	0	REIMBURSEMENT
Elotuzumab	pomalidomide and dexamethasone for the treatment of		WITH RESTRICTIONS
	adult patients with relapsed and refractory multiple		ESMO
	myeloma who have received at least two prior therapies		
	including lenalidomide and a proteasome inhibitor and have		
	demonstrated disease progression on the last therapy.		

	Daratumumab is indicated: - in combination with		
	lenalidomide and dexamethasone or with bortezomib,		
	melphalan and prednisone for the treatment of adult		
	patients with newly diagnosed multiple myeloma who are		
	ineligible for autologous stem cell transplant in		
	combination with bortezomib, thalidomide and		
	dexamethasone for the treatment of adult patients with		
	newly diagnosed multiple myeloma who are eligible for		
	autologous stem cell transplant in combination with		
	lenalidomide and dexamethasone, or bortezomib and		
	dexamethasone, for the treatment of adult patients with		
	multiple myeloma who have received at least one prior		
	therapy in combination with pomalidomide and	0	REIMBURSEMENT
Daratumumab	dexamethasone for the treatment of adult patients with		WITH RESTRICTIONS
	multiple myeloma who have received one prior therapy		ESMO
	containing a proteasome inhibitor and lenalidomide and		ESMO
	were lenalidomide-refractory, or who have received at least		
	two prior therapies that included lenalidomide and a		
	proteasome inhibitor and have demonstrated disease		
	progression on or after the last therapy as monotherapy		
	for the treatment of adult patients with relapsed and		
	refractory multiple myeloma, whose prior therapy included		
	a proteasome inhibitor and an immunomodulatory agent		
	and who have demonstrated disease progression on the		
	last therapy, - in combination with bortezomib,		
	lenalidomide and dexamethasone for the treatment of adult		
	patients with newly diagnosed multiple myeloma who are		
	eligible for autologous stem cell transplant.		
	Ixazomib in combination with lenalidomide and		
		0	REIMBURSEMENT
lxazomib	dexamethasone is indicated for the treatment of adult		WITH RESTRICTIONS
	patients with multiple myeloma who have received at least one prior therapy.		ESMO
	Isatuximab is indicated: - in combination with		
	pomalidomide and dexamethasone, for the treatment of		
	adult patients with relapsed and refractory multiple		
	myeloma who have received at least two prior therapies		
	myeloma who have received at least two prior therapies including lenalidomide and a proteasome inhibitor and have

Daratumumab is indicated: - in combination with

Pomalidomide	Pomalidomide in combination with bortezomib and dexamethasone is indicated in the treatment of adult patients with multiple myeloma who have received at least one prior treatment regimen including lenalidomide. Pomalidomide in combination with dexamethasone is indicated in the treatment of adult patients with relapsed and refractory multiple myeloma who have received at least two prior treatment regimens, including both lenalidomide and bortezomib, and have demonstrated disease progression on the last therapy.	 ✔ FULL REIMBURSEMENT ✔ ESMO
Zanubrutinib	Zanubrutinib as monotherapy is indicated for the treatment of adult patients with Waldenström's macroglobulinaemia (WM) who have received at least one prior therapy, or in first line treatment for patients unsuitable for chemo- immunotherapy.	FULL REIMBURSEMENT
Teclistamab	Teclistamab is indicated as monotherapy for the treatment of adult patients with relapsed and refractory multiple myeloma, who have received at least three prior therapies, including an immunomodulatory agent, a proteasome inhibitor, and an anti-CD38 antibody and have demonstrated disease progression on the last therapy.	 FULL REIMBURSEMENT ESMO
Talquetamab	Talquetamab is indicated as monotherapy for the treatment of adult patients with relapsed and refractory multiple myeloma, who have received at least 3 prior therapies, including an immunomodulatory agent, a proteasome inhibitor, and an anti-CD38 antibody and have demonstrated disease progression on the last therapy.	♥ FULL REIMBURSEMENT ♥ ESMO
Elranatamab	Elranatamab is indicated as monotherapy for the treatment of adult patients with relapsed and refractory multiple myeloma, who have received at least three prior therapies, including an immunomodulatory agent, a proteasome inhibitor, and an anti-CD38 antibody and have demonstrated disease progression on the last therapy.	✓ FULL REIMBURSEMENT ✓ ESMO
