

## Active substances set

Search phrase: Kidney cancer

Below you will find a list of active substances registered by the European Medical Agency (EMA) in the last 15 years, recommended by the European Society of Clinical Oncology (ESMO) and their reimbursement status in the country.

	Lenvatinib is indicated for the treatment of adults with	
	advanced renal cell carcinoma (RCC): - in combination with	<b>D</b> NO REIMBURSEMENT
Lenvatinib	pembrolizumab, as first-line treatment, - in combination	
	with everolimus, following one prior vascular endothelial	SMO ESMO
	growth factor (VEGF)- targeted therapy.	
	Tivozanib Hydrochloride Monohydrate is indicated for the	
Tivozanib	first line treatment of adult patients with advanced renal	
hydrochloride	cell carcinoma (RCC) and for adult patients who are VEGFR	<b>OND REIMBURSEMENT</b>
-	and mTOR pathway inhibitor-naïve following disease	📀 ЕЅМО
monohydrate	progression after one prior treatment with cytokine therapy	
	for advanced RCC.	
	Renal cell carcinoma (RCC) Belzutifan is indicated as	
	monotherapy for the treatment of adult patients with	<b>D</b> NO REIMBURSEMENT
Belzutifan	advanced clear cell renal cell carcinoma that progressed	
	following two or more lines of therapy that included a PD-	<b>ESMO</b>
	(L)1 inhibitor and at least two VEGF-targeted therapies.	
Pazopanib	Pazopanib is indicated in adults for the first-line treatment	
	of advanced renal cell carcinoma (RCC) and for patients	WITH RESTRICTIONS
	who have received prior cytokine therapy for advanced	
	disease.	SMO ESMO

Axitinib	Axitinib is indicated for the treatment of adult patients with advanced renal cell carcinoma (RCC) after failure of prior treatment with sunitinib or a cytokine.	•	REIMBURSEMENT WITH RESTRICTIONS ESMO
Nivolumab	Nivolumab as monotherapy is indicated for the treatment of advanced renal cell carcinoma after prior therapy in adults. Nivolumab in combination with ipilimumab is indicated for the first-line treatment of adult patients with intermediate/poor-risk advanced renal cell carcinoma. Nivolumab in combination with cabozantinib is indicated for the first-line treatment of adult patients with advanced renal cell carcinoma.	•	REIMBURSEMENT WITH RESTRICTIONS ESMO
Cabozantinib	Cabozantinibis indicated as monotherapy for advanced renal cell carcinoma (RCC): - as first-line treatment of adult patients with intermediate or poor risk, - in adults following prior vascular endothelial growth factor (VEGF)-targeted therapy. Cabozantinib, in combination with nivolumab, is indicated for the first-line treatment of advanced renal cell carcinoma in adults.	•	REIMBURSEMENT WITH RESTRICTIONS ESMO
Pembrolizumab	Pembrolizumab, in combination with axitinib, is indicated for the first-line treatment of advanced renal cell carcinoma in adults. Pembrolizumab, in combination with lenvatinib, is indicated for the first-line treatment of advanced renal cell carcinoma in adults. Pembrolizumab as monotherapy is indicated for the adjuvant treatment of adults with renal cell carcinoma at increased risk of recurrence following nephrectomy, or following nephrectomy and resection of metastatic lesions.	•	REIMBURSEMENT WITH RESTRICTIONS ESMO
Ipilimumab	Ipilimumab in combination with nivolumab is indicated for the first-line treatment of adult patients with intermediate/poor-risk advanced renal cell carcinoma.	<ul><li>✓</li><li>✓</li></ul>	FULL REIMBURSEMENT ESMO
