

# Active substances set

Search phrase: nivolumab

Below you will find a list of active substances registered by the European Medical Agency (EMA) in the last 15 years, recommended by the European Society of Clinical Oncology (ESMO) and their reimbursement status in the country.

# Malignant stomach cancer

Nivolumab	Nivolumab in combination with fluoropyrimidine- and platinum-based combination chemotherapy is indicated for the first-line treatment of adult patients with HER2-negative advanced or metastatic gastric, gastro-oesophageal junction (GEJ) or oesophageal adenocarcinoma whose tumours express PD-L1 with a combined positive score	<ul><li>✓</li><li>✓</li></ul>	FULL REIMBURSEMENT ESMO
	(CPS) ≥ 5.		

#### **Colon and rectum cancer**

Nivolumab in combination with ipilimumab is indicated for the treatment of adult patients with mismatch repair deficient or microsatellite instability-high colorectal cancer in the following settings: - first-line treatment of unresectable or metastatic colorectal cancer; - treatment of metastatic colorectal cancer after prior fluoropyrimidinebased combination chemotherapy.

#### Liver cancer

Nivolumab

Nivolumab

Hepatocellular carcinoma (HCC) Nivolumab in combination with ipilimumab is indicated for the first-line treatment of adult patients with unresectable or advanced hepatocellular carcinoma.

## Tracheal, bronchus, and lung cancer

Nivolumab in combination with ipilimumab and 2 cycles of
platinum-based chemotherapy is indicated for the first-line
treatment of metastatic non-small cell lung cancer in adults
whose tumours have no sensitising EGFR mutation or ALK
translocation. Nivolumab as monotherapy is indicated for
the treatment of locally advanced or metastatic non-small
cell lung cancer after prior chemotherapy in adults.
Nivolumab in combination with platinum-based
chemotherapy is indicated for the neoadjuvant treatment of
resectable non-small cell lung cancer at high risk of
recurrence in adult patients whose tumours have PD-L1
expression $\geq$ 1%.

# **Kidney cancer**

Nivolumab

**Nivolumab** 

Nivolumab as monotherapy is indicated for the treatment of advanced renal cell carcinoma after prior therapy in adults. Nivolumab in combination with ipilimumab is indicated for the first-line treatment of adult patients with intermediate/poor-risk advanced renal cell carcinoma. Nivolumab in combination with cabozantinib is indicated for the first-line treatment of adult patients with advanced renal cell carcinoma.

## Malignant bladder cancer

Urothelial carcinoma Nivolumab in combination with
cisplatin and gemcitabine is indicated for the first-line
treatment of adult patients with unresectable or metastatic
urothelial carcinoma. Nivolumab as monotherapy is
indicated for the treatment of locally advanced
unresectable or metastatic urothelial carcinoma in adults
after failure of prior platinum-containing therapy. Adjuvant
treatment of urothelial carcinoma Nivolumab as
monotherapy is indicated for the adjuvant treatment of
adults with muscle invasive urothelial carcinoma (MIUC)
with tumour cell PD-L1 expression ≥ 1%, who are at high
risk of recurrence after undergoing radical resection of
MIUC.

## Hodgkin's disease

#### Nivolumab

Nivolumab

Nivolumab as monotherapy is indicated for the treatment of adult patients with relapsed or refractory classical Hodgkin lymphoma (cHL) after autologous stem cell transplant (ASCT) and treatment with brentuximab vedotin.
